

# Supply Chain

In today's volatile and increasingly digital global business environment, companies need adaptable Supply Chain networks to **move quickly and flexibly**. Supply Chain professionals must have the ability to capitalize on new innovations. New technologies, such as social, mobile, robotics, 3D printing, data analytics and cloud services can derail current Supply Chain operations.

Winning companies will be able to embrace these disruptions, move away from the status quo and **seize competitive advantage**.

Deloitte predicts that by 2020, 70% of companies will use advances in data analytics and wearable technology.

This shift will have a deep impact on the roles and skill sets required in the future. Our clients need candidates with a complete understanding of the business to **effectively assimilate emerging technologies** and add value to the supply chain.

At CPS we work with clients to help them identify their future Supply Chain leaders. Our immersion in this space allows us to **identify, target and assess best-in-class capability and potential** in an increasingly tight labor market.

Let us help you build the Supply Chain team that will contribute to your long-term business success.

**Call us today at 315-457-2500 x6 or email us at [sales@cpsrecruiter.com](mailto:sales@cpsrecruiter.com) to learn more!**
